

Complete

Cloud computing is a powerful and versatile technology that can boost your business performance and efficiency. To maintain an appropriate level of control, it is necessary to be aware of how it's setup aligns to your business requirements. There are many instances where you require a holistic snapshot of the health of your Cloud environment, one that doesn't require that you already know the answers.

This is where Haylix ASSESS: Complete will deliver a broad-based assessment of your cloud infrastructure to identify potential issues that might compromise your service's fit for purpose. Through the Complete assessment, available in three tiers with varying levels of detail (Foundation, Intermediate, Comprehensive), you will understand the current state of your cloud environment against, potential threats, vulnerabilities, commercial efficiency, performance mismatches, and compliance best practices. This will form the foundation of any appropriate remediation activity based on a holistic perspective.

All Haylix ASSESS: Complete assessments cover performance, commercial, cyber and compliance. You'll get a detailed report with a high-level gap analysis based on the assessment tier you choose.

Our Foundation assessment is designed for those who want a complete, easy to digest overview of their current cloud state, and how it compares to industry standards and best practices.

Our Intermediate and Comprehensive assessments are ideal for those who want to dive deeper into specific areas of mis-alignment and get actionable recommendations on how to improve them.

As part of the Comprehensive assessment, you will be provided with detailed instructions and guides on specific remediation actions that can then be forwarded to your internal team or any qualified service provider.
